

Farmers as a Stake Holder in Mobile Application

Farmers are primary stakeholders in the mobile application of Kirti Group because they are the primary users and the main source of revenue for the group. The application is designed to serve the needs of farmers, by connecting them with buyers and allowing them to sell their products. The app will provide them with an easy and efficient way to sell their products, such as post their inventory, search for products that they are interested in buying or selling and get updated with the latest commodity rates.

Additionally, the app will also provide farmers with information on weather, market trends, and other relevant information that will help them to make more informed decisions about when to plant and harvest their crops. This will help them to increase their yields and improve their income.

Furthermore, farmers will also be able to store their commodities in Kirti's warehouse for rent, and take loans against the stored commodities, which will help them to manage their cash flow more effectively, and invest in their operations.

In summary, farmers are the primary stakeholders in the mobile application of Kirti Group because the app is designed to serve their needs and improve their livelihood. They are the main source of revenue for the group, and the app will help them to sell their products, increase their yields, manage their cash flow more effectively, and invest in their operations.

Traders as a Stake Holder in Mobile Application

The application will provide traders with access to a wide range of products offered by various farmers, which will help them to find products that match their needs. The app will also provide traders with the latest commodity rates, which will help them to make more informed decisions about when to purchase products.

Additionally, the app can also provide traders with a secure payment gateway, which will help them to make transactions with farmers in a secure and efficient way. This will help to reduce the risk of fraud and ensure that traders are able to purchase products from farmers with confidence.

Furthermore, the app can also have a feature for traders to place orders to Kirti Group for the desired products, which will then connect with the farmers for the supply.

In summary, the mobile application of Kirti Group can serve as a facilitator for traders to connect with farmers, by providing them with access to a wide range of products, the latest commodity rates, a secure payment gateway, and a feature for placing orders, which will help them to purchase products from farmers in a more efficient, secure and convenient way.

Businesses as a Stake Holder in Mobile Application

The mobile application can serve as a platform for businesses to connect with the Kirti Group and purchase raw materials in a more efficient and convenient way. It will provide businesses with real-time information on the prices of various commodities, which will help them to make more informed decisions about when to purchase raw materials.

The app will also have a messaging feature that allows businesses to communicate with the Kirti Group directly, which will help to facilitate communication and make it easier for businesses to connect with the group and negotiate prices.

Furthermore, the app will provide businesses with the ability to track their purchased products and the movement of their commodities in real time. This will help them to ensure that the raw materials are delivered and received in a timely manner, which will help them to manage their inventory more effectively and satisfy their customers' needs.

In summary, businesses are stakeholders in the mobile application of Kirti Group as they will use the app to purchase raw materials from the Kirti Group, stay updated on commodity rates, communicate with the Kirti Group, and track their purchased products, which will help them to manage their inventory and reduce their costs.

Brokers as a Stake Holder in Mobile Application

Brokers are also stakeholders in the mobile application of Kirti Group. They act as intermediaries between farmers and buyers, and the app will serve as a platform for them to connect with the Kirti Group and facilitate transactions between farmers and buyers.

The app will provide brokers with real-time information on the prices of various commodities, which will help them to make more informed decisions about when to buy or sell products. This can help them to maximize their profits by buying or selling products at the right time.

The app will also have a feature for brokers to manage their linkage between farmers and the Kirti Group for transactions. This will help to streamline the buying and selling process and make it more efficient for all parties involved.

Furthermore, the app will provide brokers with the ability to track their transactions and the movement of commodities in real time. This will help them to ensure that the products are delivered and received in a timely manner, which will help them to manage their transactions more effectively.

In summary, brokers are stakeholders in the mobile application of Kirti Group as they will use the app to connect with the Kirti Group, stay updated on commodity rates, manage their linkage between farmers and the Kirti Group for transactions, and track their transactions, which will help them to manage their transactions more effectively and maximize their profits.
